To: Seafood Task Force

I would like to stress the importance of:

1. including programs and funding for education regarding the
  - a. health benefits of seafood consumption
  - b. significance and support for high quality and safe seafood aquaculture programs
  - c. importance of the role of underutilized species
  
2. including fishermen and seafood industry participation in task force procedures with an understanding that cooperative management and assessment are key factors for successful data collection and policy development and effectiveness.
